

SUSTAINABLE FUTURES

A season of films exploring current environmental, economic and political concerns

Our film for January 2018 is

Turning the vision of a green economy into profitable reality for everyone

The cost of burning fossil fuels—oil, coal, and natural gas, is staggering – both to the environment and to our wallets.

This film shows how we all have the power to improve energy efficiency, replace fossil fuels with clean energy, ensure a safer environment for future generations and save ourselves money.

“We’ve Got the Power”

visits companies and communities around the world who are putting cutting-edge clean energy technology into daily use, including a new town in California designed to use zero net energy and a groundbreaking solar technology project in Andalucía, Spain that powers 20,000 homes at night. It features teams of leading edge engineers and researchers and highlights the important role of government in policy making, research, regulation and public and environmental protection.

“We’ve Got the Power”, from the producers of the Emmy Award-winning, *The Next Frontier: Engineering the Golden Age of Green*, has an Emmy Award for best animation

Thursday, January 18th

7.30pm at Clun Methodist Church

Free admission, Refreshments, Donations appreciated.
